

Metal & Stain Control

WEEKLY

Neutralizes Minerals that Cause Staining of Surfaces and Corrosion of Metals

DIRECTIONS FOR USE:

When filling the spa: Add 16 oz. to spas up to 500 gallons of water, before any sanitizer is added. Remove and clean cartridge filter within 24 hours.

Maintenance: If fresh water is frequently added due to evaporation or bather activity, you may need to add extra **Metal & Stain Control**. Add 1 oz. per 100 gallons to hot tub water while the pump is running. Allow the water to circulate overnight or until the water is clear. This will help to control any mineral staining and will help to protect the heating element from corrosion. If staining continues due to excessive mineral levels in water, increase dosage.

NOTE: Draining and cleaning of spa or hot tub is recommended every 3 months.
